Undertone: Golden

DERMATOLOGIST ENDORSED

PROTECTION AGAINST UV INDUCED FREE RADICAL DAMAGE WITH POWERFUL ANTIOXIDANTS.

GLUTATHIONE

An antioxidant peptide produced naturally in our bodies, glutathione helps recycle other antioxidants. Glutathione levels decrease with age.

RESVERATROL

Derived from grape seeds or the Japanese knotweed plant, this antioxidant neutralizes free radical damage, protecting skin from sun damage.

TOCOPHEROL ACETATE, USP (VITAMIN E)

An effective form of vitamin E for the skin, this highly moisturizing and fat-soluble vitamin protects cell membranes and acts as an antioxidant, which strengthens the effect of vitamin C.

CAFFEINE

An antioxidant that protects skin from UV-induced free radical damage.

SILYBIN & KNOTGRASS EXTRACT

Rich in flavonoids and potent antioxidants to protect the skin from external aggressors like UV rays and free radicals.

THE IMPORTANCE OF SUNSCREEN

Regular use of sunscreen as directed by a skincare professional can help prevent skin cancer by protecting you from the sun's harmful UV rays. The American Academy of Dermatology (AAD) recognizes sunscreen as the most effective topical formulation used to prevent and reverse the signs of aging.
